WORK EXPERIENCE

Software Engineer Intern Jan 2026 - Present
Amdocs

- Wrote and executed Unix shell scripts using MobaXTerm to monitor HBase system health, storage capacity, and stress levels.
- Supported backend operations by automating routine diagnostic tasks, reducing the need for repetitive manual checks.
- Assisted in backend ticket automation by applying scripting solutions to streamline issue identification and workflows.

IT Support & Systems Intern Jul 2025 - Nov 2025
Directorate for Personnel and Records Management

- Diagnosed and resolved complex hardware and software issues across 50+ desktops and laptops, ensuring uninterrupted daily operations.
- Configured and maintained network infrastructure, including Ethernet setups, to guarantee stable and secure internet access for all users.
- Delivered comprehensive IT support to staff members, optimizing technical workflows within a fast-paced government office environment.

Full Stack Developer Intern Jun 2024 - Aug 2024
Fildev

- Engineered and integrated RESTful APIs to facilitate seamless and secure data exchange between frontend interfaces and backend architectures.
- Managed the deployment of applications on Linux servers utilizing SSH and Putty, ensuring high availability and stable remote access.
- Optimized system performance by refining MongoDB database queries and implementing responsive UI/UX enhancements.

PROJECTS

System Analyst & Full Stack Developer Jan 2025 - Present
TeamWeb

- Architected and structured comprehensive system frameworks, prioritizing scalability to reliably support a user base of 300+ students and 20+ teachers.
- Developed robust backend systems supporting student pre-registration workflows and complex administrative management features.
- Integrated API endpoints to establish seamless and efficient communication protocols between client applications and servers.

Game Developer & Researcher Jul 2025 - Nov 2025
Worshippers of The Deep (Thesis)

- Programmed core gameplay systems utilizing Godot and GDScript, successfully implementing dynamic potion, card, and combat mechanics.
- Designed and trained a PPO-based Reinforcement Learning enemy agent using Python that dynamically adapts to player behavior, achieving a 100% user win rate during research testing.

TECHNOLOGIES/SKILLS

- **Game Engines:** Unity, Godot
- **Programming Languages:** C#, Java, Python, JavaScript (Node.js, React.js), GDScript
- **Web Development:** Express.js, HTML, SQL
- **Databases:** MySQL, MongoDB, Firebase, HBase
- **Cloud, OS & Hosting:** AWS S3, GlassFish, Unix/Linux, SSH/Putty
- **Development Tools:** Visual Studio Code, Git/GitHub, Postman, MobaXTerm, MongoDB Compass, Jira, Figma

EDUCATION

University of Santo Tomas Aug 2022 - Present

Bachelor of Science in Computer Science, *Specialization: Game Development*
Relevant Coursework: Game Programming (Unity/C#), Artificial Intelligence, Data Structures
